

This folder contains two software.

=====
COSPRO Toolkit
=====

COSPRO Toolkit is a Windows-based software that integrates commonly accessible speech analysis functions into one common platform. In addition to analyzing the acoustic properties of speech signals, the most important function of the Toolkit is to re-synthesize speech signals in annotated prosodic units by extracting acoustic parameters and perceived boundary breaks. For more information, please visit the COSPRO website at http://www.aclclp.org.tw/use_mat_c.php#cospro. The use of the Toolkit is governed by the License Agreement that comes with the COSPRO and Toolkit package.

=====
Praatcon.exe
=====

'Praatcon.exe' is a software developed by the Institute of Phonetic Sciences at the University of Amsterdam. The COSPRO Toolkit uses some of its functions to perform acoustic analysis. Praatcon.exe is governed by the GNU General Public License included in this folder (gpl.html). For more information about Praatcon.exe, or other versions of Praat, please visit its website at <http://www.fon.hum.uva.nl/praat/>.
